

# The beauty of a clinic in the designer's view

**By Mauricio Queiroz**

**T**he concept behind *Ateliê Oral*, a high-standard specialized dental practice, includes performing extensive dental works within short periods of time. The *Ateliê* was still located elsewhere by the time my wife went there for an appointment, and it didn't take long for me to realize that it was rather different from all other private practices.

I've always known this type of business for I have a couple of dentists in the family. But what stood out to me was the impressive structure, that allows impressions and implant placement to be performed within the clinic facilities. Usually, treatment starts after an initial appointment, a photographic recording session, and a second appointment to present the treatment plan. By the time patients return for their next appointment, all procedures can be executed in the same day.
